

When critical pumping applications require uninterrupted pumping TLC Controls provides a Battery Powered Pump Control System. These self contained systems are designed to work with 24 volt DC vertical storm pumps supplied by various pump manufacturers.

Factory wired duplex control panel is provided with pump disconnects, DC magnetic contactors, alternator, battery voltmeters with test buttons, and two battery chargers.

Marine type deep cycle batteries are wall or rack mounted remote from control panel (because of battery off-gassing).

Individual battery chargers are provided for each motor. Chargers sized to support all batteries plus provide full on line operation with no battery drain down. Chargers automatically switch to trickle charge mode to prolong battery life.

Weatherproof enclosure is provided for outdoor installations. Control panel is supplied with Hand-Off-Auto selector switches, Run pilot lights and Elapsed time meters.
