

PLC driven Constant Level Control
for two remote VFD's

TLC Controls Inc. has over 20 years experience building control systems using the latest technological applications for PLC's.

TLC operations include highly skilled technicians and software programmers experienced in virtually all brands of PLC's.

TLC provides full turn-key systems including control, software development, field start-up and continued assistance.

Why PLC's?

- Solid State for years of trouble free service
- Little or no maintenance required
- More precise control in complex systems
- User friendly operator interfaces
- Communications with remote computers
- Systems designed to change and monitor process from remote locations, such as office headworks or main plant
